P.U.R.T.® For Wool

Pet Urine Removal Treatment for Wool Fibers

PURT for Wool is an extraordinary odor removal product designed especially for wool fibers. Next to carpet cleaning and protecting, odor removal may be the most needed service for our customers. Chem-Dry franchises worldwide have had fantastic success using P.U.R.T. II to remove difficult pet odors. However, because of the aggressive oxidizing nature of P.U.R.T. II, it may cause wool fibers to fade resulting in a bleach spot. P.U.R.T. for Wool is gentle enough for wool fibers yet still effective on odors.

P.U.R.T. for Wool is ideal for natural fibers , it helps mitigate any dye migration that may occur.

P.U.R.T. for Wool is not a re-formulation of PURT II, it is a completely different product. Like P.U.R.T. II, P.U.R.T. for Wool is an oxidizer. Oxidizers work by adding oxygen to a stain or odor molecule and eventually breaking that molecule into fragments. As the oxygen breaks down the odor molecule, the odor will be intensified. In other words, let the customer know the odor will get worse before it gets better. When used properly, the smell will be gone when the carpet is dry (24 – 48 hrs.).

Your first step after identifying the location of the urine will be to rinse the spot well. You will have best results extracting with warm water before treating the effected areas. The HCE stair tool or Water Claw® can be used.

Area Rugs

When cleaning area rugs, it is best to remove the rug from the home so as not to damage the surface under the rug. It is also recommended to rinse and treat both the front and back for best results. Under normal cleaning conditions, you would dry the rug as quickly as possible, however, the area treated with PURT for Wool needs to stay wet with PURT for 24 to 48 hours.

Safety Precautions

Once mixed, the product will off gas. Capping the container will cause it to expand and possibly explode. Wear safety glasses, gloves and avoid any contact with the product. Read Safety Data sheets (SDS) before using this product. In case of ingestion, do not induce vomiting. Instead, contact a physician immediately. In the event of skin contact, wash skin thoroughly with water.

Shelf Life

In powder form the shelf life is two years. After PURT for Wool is mixed, it must be used immediately.

RTU pH=5-6

P.U.R.T. for Wool

Item # C027

pH 5-6

MIXING & APPLICATION INSTRUCTIONS

1. Locate urine using a black light, moisture detector or your nose.
2. Rinse contaminated areas well with hot water and extract with the WaterClaw® or an extraction tool.
3. Mix one packet of P.U.R.T. for Wool to one gallon of hot or warm water. Allow it to dissolve completely by shaking or stirring
4. If desired, add a Chem-Dry fragrance according to label instructions.
5. Soak affected areas with P.U.R.T. for Wool. Work into pad by applying pressure.

   Allow P.U.R.T. for Wool to dry. (Carpet should remain wet with PURT for Wool for 24.
